

QR automated registry

Fast, paperless staff transport registers for Corruseal Group

Prepared by NextQ

On behalf of Maponya and Moragi (Pty) Ltd

8 October 2026

Two modes, one register

TODAY

Standard register

- Passenger writes their line on the tablet
- Signs with a finger at boarding and drop off
- Best where a signature is required

NEW

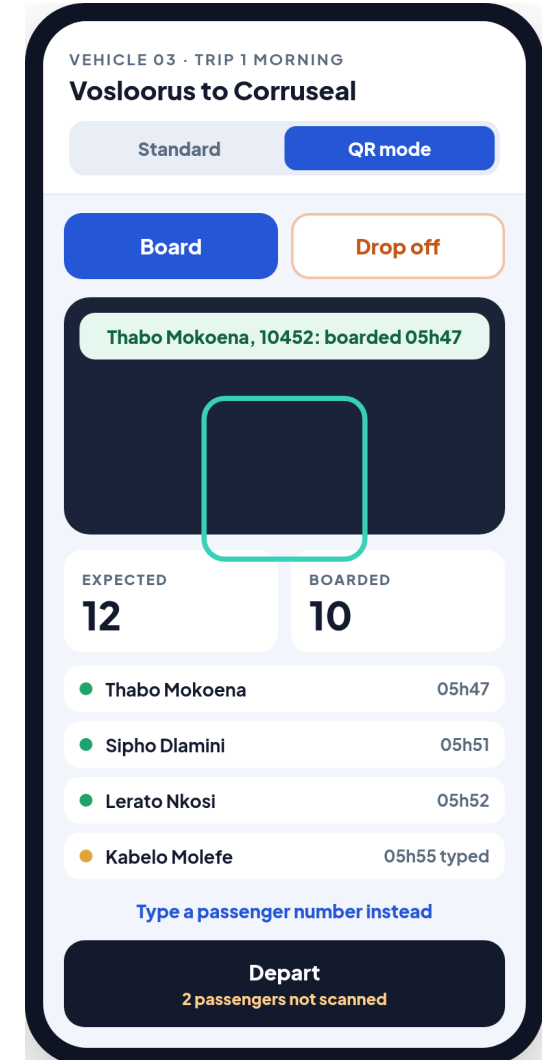

QR mode

- Passenger shows a QR card, driver scans it
- About two seconds per person, no typing
- No phone, app or data needed by the passenger

The driver switches mode at any time. Both write the same register lines, so the PDF and Excel registers, the day reports and the security sign out confirmation stay exactly as they are.

How QR mode works on the bus

- 1 Employee carries the card**
Every Corruseal passenger gets a wallet size QR card.
- 2 Driver taps Board or Drop off**
An explicit choice, so a second scan never flips someone the wrong way.
- 3 Scan, or type the number**
Camera reads the card. A damaged card? The driver types the printed number.
- 4 The record is saved**
Name, clock number, time, vehicle, trip and route, live for Corruseal.

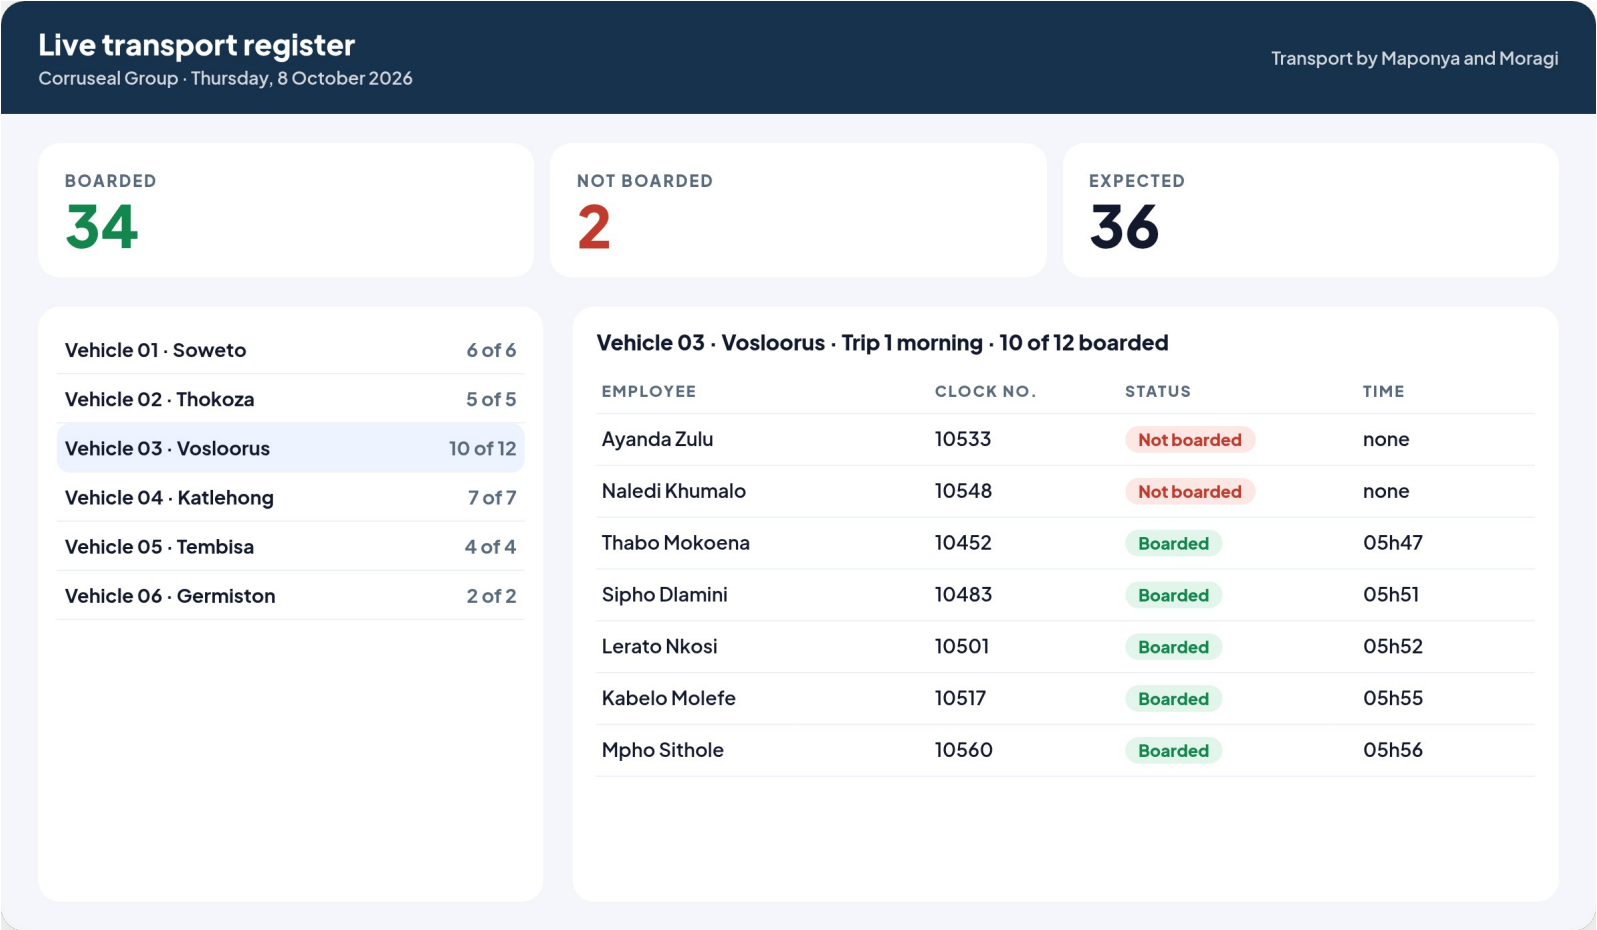

Every scan creates a record

FIELD	EXAMPLE
Employee	Thabo Mokoena
Clock number	10452
Date and time	8 October 2026, 05h47
Action	Board (sign in)
Vehicle and driver	Vehicle 03, A. Maponya
Trip and route	Trip 1 morning, Vosloorus to Corruseal
Pickup point	Vosloorus, Ext 28 rank
How	Scanned (or typed in)

Nothing else to type

- Each driver signs in once on their own vehicle.
- The vehicle, trip, route and date come from the trip they started.
- At drop off, the afternoon scan closes the same person's line with a time out.
- Someone already on another bus cannot be boarded twice.

Corruseal sees every trip live

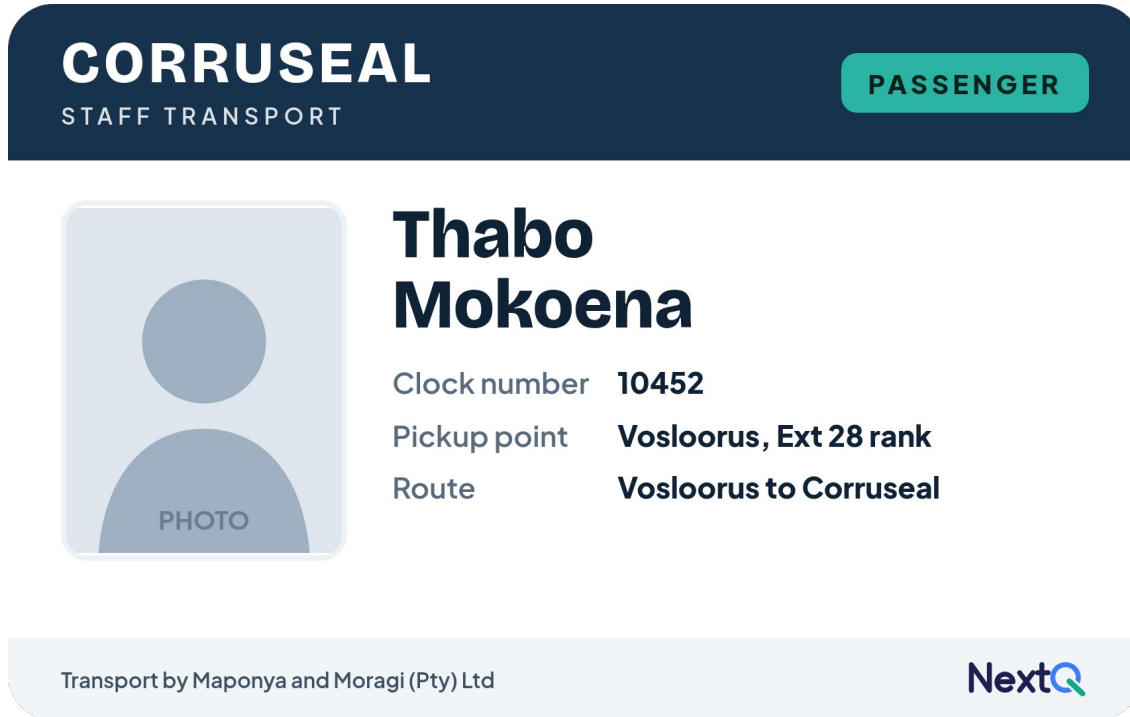

Boarded, not boarded, expected
For the whole day, per vehicle and per trip.

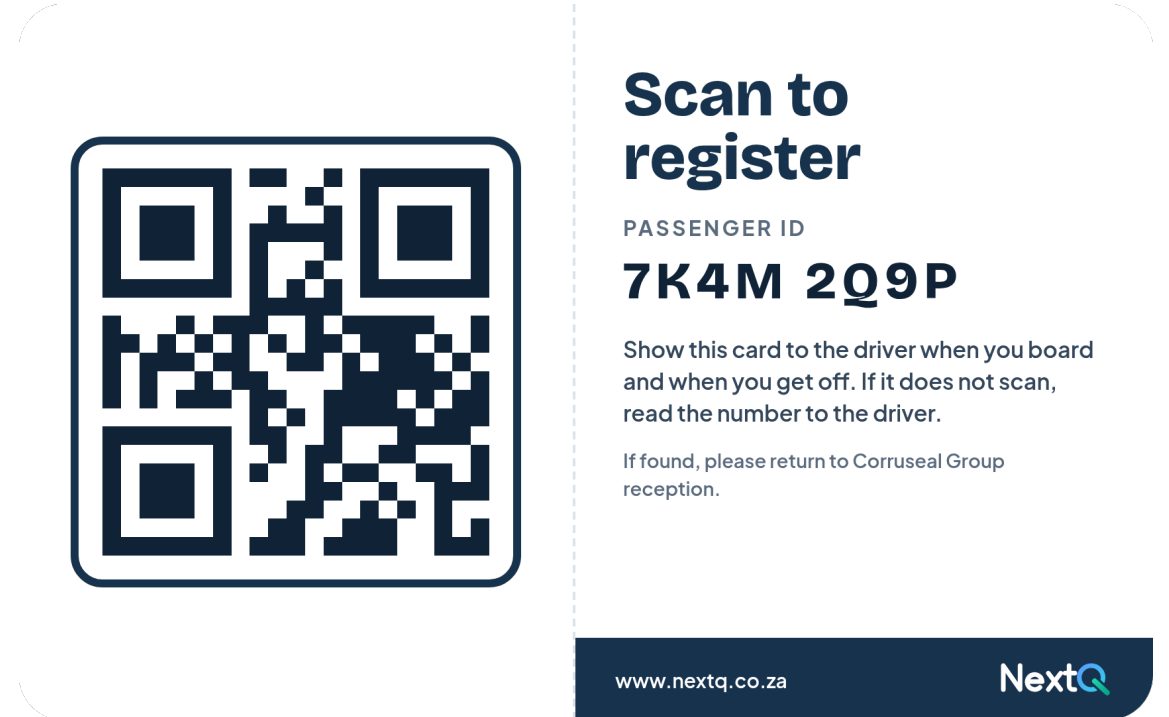

Click into any vehicle
Who boarded, at what time, and who is missing.

Same reports as today
PDF and Excel registers, emailed daily if wanted.

The passenger card, with photo

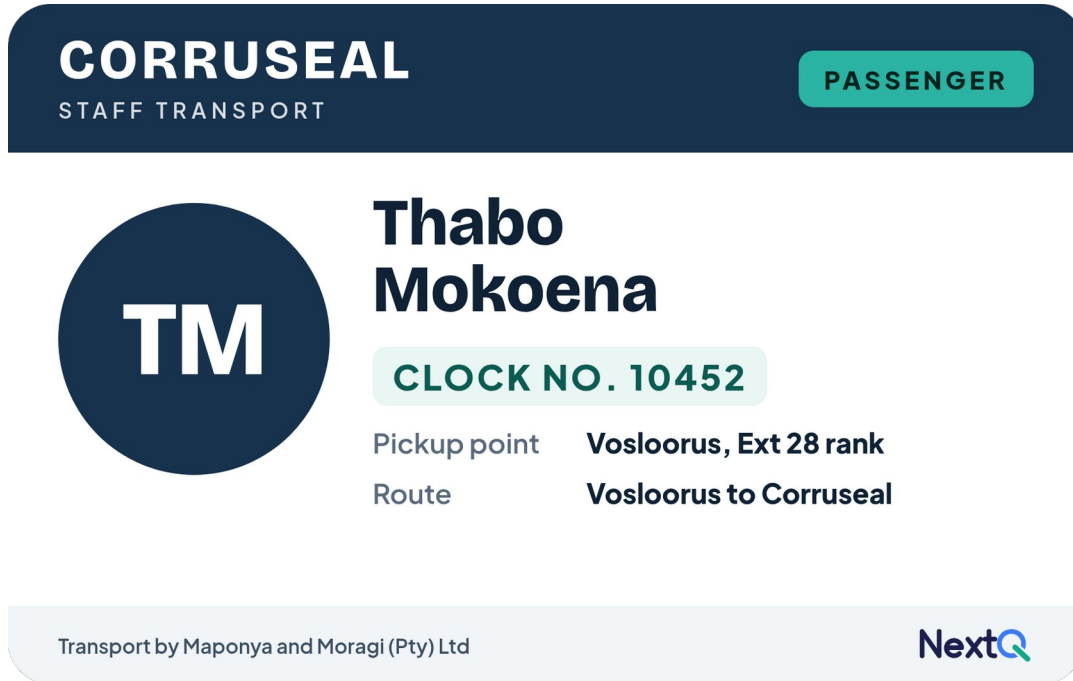

FRONT

BACK

Wallet size, landscape: 85.6 × 54 mm, the size of a bank card, so it fits a wallet, a lanyard or a card holder. Corruseal's own logo and colours go on the front.

Option two: without a photo

Same back, same QR. The initials take the place of the photo and the clock number is larger.

With photo

- Driver can see the card belongs to the person
- Needs a photo of every employee
- More setup before the cards can be printed

Without photo

- Lower cost and faster to issue
- New staff get a card the same day
- A card could be used by someone else

Privacy and lost cards

1 The QR holds only a number

A random passenger ID such as 7K4M 2Q9P. No name, address or ID number is inside it; the app looks the person up in the secure system.

2 No home address on the card

A lost card cannot lead anyone to an employee's home. The address stays in the system, in line with POPIA. The card shows the pickup point instead.

3 Lost or damaged card

The administrator cancels the old card and prints a new one with a new number. The old card stops working at once.

4 History stays whole

Every employee keeps one permanent record behind the card, so trips before and after a new card stay together.

What we suggest for Corruseal

Explicit Board and Drop off

The driver chooses the action before scanning. A double scan shows "already on board" instead of signing the person out.

Works with no signal

Scans are saved on the device and sent as soon as there is signal, like the tablet does today.

A check letter in the number

The last character of the card number checks the rest, so a typing mistake is caught at once.

Cards printed from the portal

Import the employee list, then print a PDF sheet of cards. Reprint or replace any card in one click.

Expected list per vehicle

Each route carries its expected passengers, so the driver and Corruseal see who is missing before departure.

Security scans at the gate

The officer can scan the same cards at drop off, feeding the existing security sign out confirmation.

Next steps

A short pilot on one vehicle, then all six

1. Corruseal sends the employee list: name, clock number, pickup point and route
2. Choose the card: with photo or without
3. We build QR mode and card printing into NextQ
4. Pilot on one vehicle for a week, then roll out
